Dear Sir,

Re: Genistein and Soy Formula.

I enclose several scientific papers for your consideration. Please note that, in sheep at least, there is an inheritable resistance to the effect of phytoestrogens. This could be relevant not only to extrapolation from populations of high traditional intake of soy products but also to laboratory animals fed soy containing foods for multiple generations. Therefore I enclose some initial studies and also the initial British investigations on this topic.

From a consumer perspective, informed choice is a basic right. Therefore I endorse regulatory recommendations from New Zealand (1995) and from the United Kingdom (2003 and 2004.)

Yours sincerely,
↓
